

# SUST Connect

Connecting SUSTians across the globe...

# Environment Setup & Services Integration

1. We used [Node.js](#) as our backend server. [React.js](#) as our frontend development framework, [Express.js](#) as our backend development framework.
2. We used Clerk as our user authentication API.
3. Inngest for backend jobs.
4. ImageKit for smooth media

# Frontend Integration

1. Implemented login page with Clerk (email verification, 2-step verification)
2. Added Simplified news feed
3. Simple sidebar for smooth navigation
4. Light colors for clear visibility
5. Profile settings
6. Creating stories
7. Making Connections

# Fully functional frontend demonstration

(demonstrating website on local host)

## Next steps

1. Adding dark mood for user convenience.
2. Implementing all the backend
3. Deploying on the web
